### DETAILED ACTION

This action is supplemental to the previous office action. The response due date is from the mailing date of this action, not the previous one. All aspects of the previous office action are repeated and included herein, except that the last rejection is replaced with this version, which has the correct claim numbers and reasoning.

Claims 65-66 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 17-22 of copending Application No. 11042526. Although the conflicting claims are not identical, they are not patentably distinct from each other because: Form V of 11042526 is a hydrate and has a water content falling within claim 66 here.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

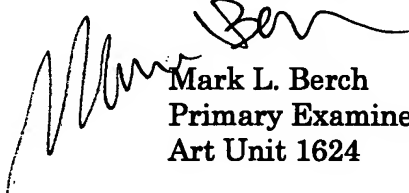

With regard to the process claims, while a compound and its synthesis are not patentably distinct, in the absence of a restriction requirement, this method is not present in 11042526, and hence the method claims are not rejected.
